Code Sentinel Data

EVA Decompression Sickness Sample

A real 40-subject subset, cut straight from the paid delivery at the same seed

SAMPLE PASSPORT

> This sample is a true row-level subset of the paid dataset, cut from the same seed and the same generation run. It is provided to evaluate schema, quality, and fit for purpose before purchase; production use requires the licensed dataset.

Version 1.0 | October 2026 | sentineldata.com.ua

1. What This Is

The first 40 of 10,000 subjects in the full delivery, by subject ID (seed 20261027) -- the exact same rows a buyer of the full dataset receives for those 40 subject IDs, not a separate mini-generation and not hand-picked for a flattering result. `profile/truth` are included in full (they are branch-level, not subject-level -- see `DATA_DICTIONARY.md`).

Table	Rows	Matches full-dataset schema
crew_sample.parquet	40	Yes, identical columns
profile_sample.parquet	1,053 (full table)	Yes, identical columns
truth_sample.parquet	1,053 (full table)	Yes, identical columns
observations_sample.parquet	120 (40 subjects x 3 branches)	Yes, identical columns
outcomes_sample.parquet	120 (40 subjects x 3 branches)	Yes, identical columns

2. What To Verify With This Sample

- **Schema match** against `DATASET/schema.json` and `DATASET/DATA_DICTIONARY.md` in the full passport.
- **Counterfactual pairing** -- every `outcomes_sample` row has a `counterfactual_set_id` resolving to its two paired rows within this same 120-row sample.
- **Truth/observations separation** -- confirm no true-physiology column is shared between the two tables.

3. What This Sample Cannot Show

> **Population-level statistics do not hold at n=40.** The calibration-reproduction numbers, the counterfactual-effect summary, and the benchmark results all require the full 10,000-subject cohort and are documented in the full `DATA_PASS/` and `VALIDATION/` passports, not reproducible from this sample.

4. License

This sample is for **evaluation only**. It is not licensed for model training, benchmarking, or any production use. The full dataset license is described in `DATA_PASS/passport_EN.pdf`, Section 1.
