Code Sentinel Data

Free Sample

A real 32-subject subset of the full delivery -- not a mockup, not resampled, not re-generated at a smaller seed

---

SAMPLE PASSPORT

> This sample is a true row-level subset of the paid dataset (same seed, same generation run) -- not a separately generated preview. Provided to evaluate schema, quality and fit before purchase, and not licensed for production use.

Version 1.0 | October 2026 | sentineldata.com.ua

1. What This Is

32 of the 10,000 subjects in the full delivery, taken from the actual generation run (seed 20261027) -- the exact same rows a buyer of the full dataset gets for those 32 subject IDs, not a separate mini-generation and not hand-picked for a flattering result.

Table	Rows	Cols	Matches full-dataset schema
crew.parquet / .csv	32	7	Yes, identical columns
truth.parquet / .csv	9,632	11	Yes, identical columns
observations.parquet / .csv	5,312	8	Yes, identical columns
outcomes.parquet / .csv	64	9	Yes, identical columns (32 factual + 32 counterfactual)

2. What To Verify With This Sample

- **Schema match** against `DATASET/schema.json` and `DATA_DICTIONARY.md` in the full passport -- every column name, type, and nullability.
- **Truth/observations separation** -- confirm no value columns are shared between the two tables (Section 2.2 of `DATA_PASS/passport_EN.pdf`).
- **Counterfactual pairing** -- every `outcomes` row has a `counterfactual_id` resolving to its paired row within this same 64-row sample.
- **Realistic noise patterns** -- `finger_cuff_dropout` correlated with vasoconstriction, not independently random (see `DATA_DICTIONARY.md`).

3. What This Sample Cannot Show

> **Population-level statistics don't hold at n=32.** Incidence rates, the derived summary tables (`population_timeseries_summary`, `countermeasure_comparison_summary`, `validation_checks`), and the benchmark results all need the full 10,000-subject cohort and are documented in the full `DATA_PASS/` and `VALIDATION/` passports, not reproducible from this sample.

4. License

This sample is for **evaluation only** -- confirming schema and data quality before purchase. Not licensed for model training, benchmarking, or any production use. The full dataset license is described in

DATA_PASS/passport_EN.pdf, Section 1.
