Sample Passport

Evaluation subset of the Research Grant Full-Cost Ledger.

What this is

This sample is a strict row subset of the full dataset: 2 awards, 438 denormalized expenditure rows joined with their award attributes. It exists to verify schema, formats and value ranges before purchase.

Full dataset

The full dataset contains 80 awards, 16k+ expenditure rows, claims, receipts, indirect-cost allocations, a daily cash-gap series and a separate answer key. The sample carries no answer key and no claim/receipt tables.

How to read

Read with pandas: pd.read_parquet('d09_sample.parquet') or pd.read_csv('d09_sample.parquet.csv' if exported). See working_with_parquet.txt for tooling notes.
